GROUNDAMDLES

Better Way Better

The Process

Our service is opposed double disc grinding, which is a method of using two opposed abrasive disc wheels to remove stock simultaneously from both sides of parts, which have parallel faces. This process can combine heavy stock removal with precision finishing in the same operation to produce a high degree of flatness, parallelism and uniformity in size and surface finish. The most unique characteristic of double disc grinding is its capability to finish high volumes of parts to extremely close tolerances, with repeatable accuracy, in the same automated operation. Opposed double disc is a precision form of grinding that in some cases can obtain lapped tolerances and is significantly faster.

Our Quality System

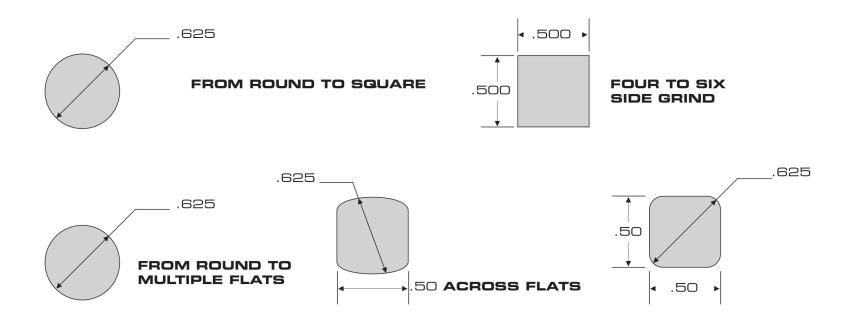

We are ISO Certified

We at BETTER WAY GRINDING believe our standards are what make our company what it is today. We expect the highest quality of work from each of our employees and managers. We provide Statistical Process Control (SPC) for customers who require it.

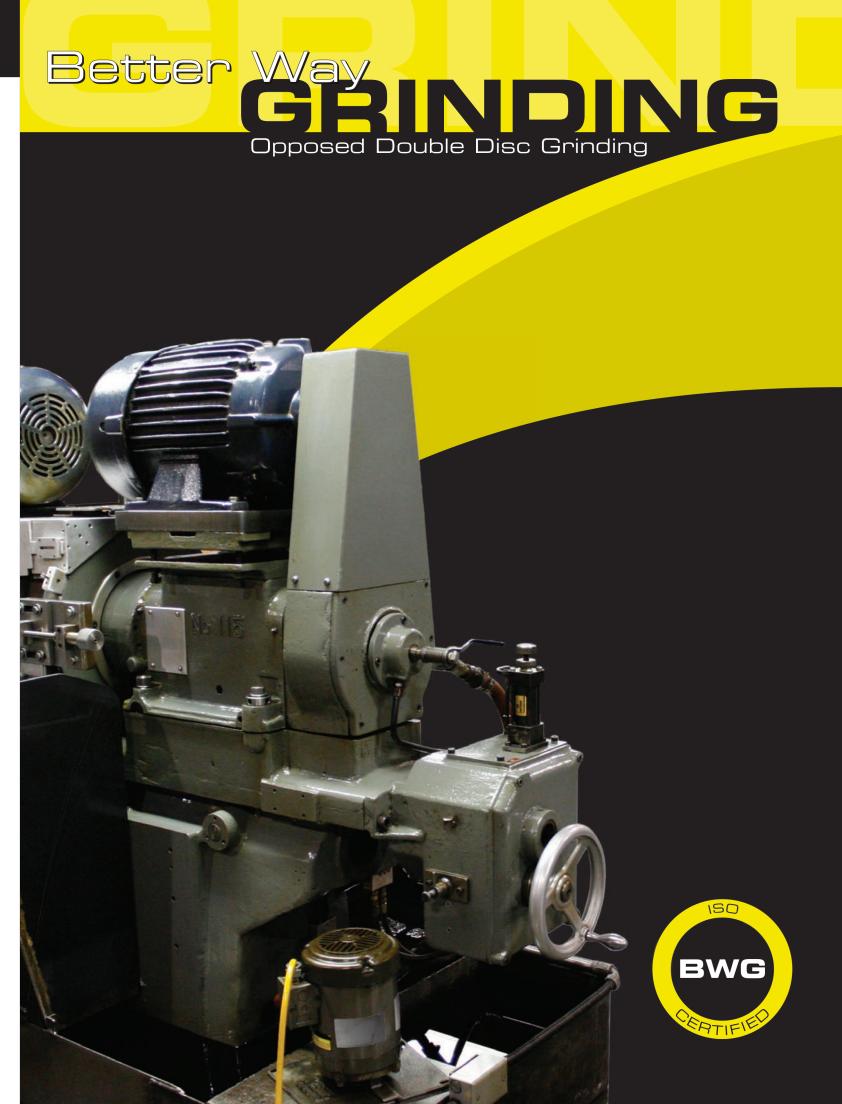

Our Team

Our management has a combined experience of over 80 years. The training our operators have gone through has developed in each one, a thorough understanding of Opposed Double Disc Grinding and customer expectations with regards to our methods of efficiency in production and Customer Quality Requirements.

Custom Grinding Operations

Better Ma

The Company

BETTER WAY GRINDING has been in business under the same ownership since 1963. Over the years it has existed, the company has evolved from a small one-man shop to an organization that employs a team of skilled operators working on a wide range of equipment.

VOLUME IS OUR SPECIALTY: Our feed - through grinding machines are equipped with various automated systems, which have the capability of processing 40,000 or more pieces per hour. We have various means by which we automate our equipment to give our customers the lowest possible price for quantities. We also do spot type grinding, so we welcome 1-to-1,000,000,000 parts.

Our Facility

Our 13,500 square foot facility speaks for itself in terms of efficiency and cleanliness. Our shipping, receiving and production departments are designed for maximum productivity. A conscientious, courteous and dedicated staff runs the office, and epitomizes the philosophy of the entire company - "Quality is our most important service and the customer comes first."

We maintain our own machine shop where necessary tooling is manufactured for our processing. Because we have many types of customers with a diversity of grinding needs, we also keep a wide range of abrasives in our inventory to accommodate them.

Our Goals

BETTER WAY GRINDING's goals are to build customer satisfaction by utilizing its three strongest assets:

- Creative Employees whose right it is to maintain unmatched levels of quality.
- Production and Processing Capabilities which are continuously improved to be state of the art.
- And finally, a Management Staff that is committed to providing Quality Opposed Double Disc Grinding at a real value to the customer.

By putting our customers first, we will remain at the forefront in their perception of Opposed Double Disc Grinding.

Our Customers

BETTER WAY GRINDING provides opposed double disc grinding service to a wide range of small to medium sized businesses. BETTER WAY GRINDING also serves large customers who exclusively supply parts to the computer, automotive, aerospace, and defense industries across the continental United States and countries over seas.
